

Linux

Welcome to UPDD Linux platform specific installation instructions and related notes for UPDD version 6.x.

UPDD provides a touch solution for Linux systems. This implementation supports the Linux operating system on X86 and X64 hardware.

This may be provided for other versions of Linux and target processors if there is a demand for this.

Please note that our Linux driver utilises LIBUSB to handle USB devices, which is used under the terms of the GNU Lesser General Public Licence as described [here](#).

These notes should be followed to install UPDD on Linux platforms.

Touch-Base Support
