

Install options

The Windows driver installation is based on the Inno installer.

The options that can be defined for this installer are defined [here](#).

Silent Install

To achieve a silent install you could use the command: UPDD_06_00_146.exe /VERYSILENT /SUPPRESSMSGBOXES /NORESTART

norestart is useful in a scripting scenario (if running the installer as part of a customer script) to ensure the installer does not decide a reboot is necessary.

See also notes on the [Trusted provider dialog](#).
