

Log files

A number of the documented troubleshooting procedures produce log files. Unless stated otherwise these files will be created on the desktop.

In some cases, particular Linux, a user desktop may not exist and therefore these files will not immediately be seen.

The actual location of the log files is as follows:

OS	Pathame
Windows	%HOMEDRIVE%%HOMEPATH%\Desktop
Linux	~/Desktop
MacOS	~/Desktop
Android	/data/data/updd/ or /data/data/updd/log (since 6.0.501)
