

Windows 64bit API files

Starting with UPDD version 6.0.365 a 64 bit version of the Windows API is available below.

Select the download version that matches or is the closet to you driver version:

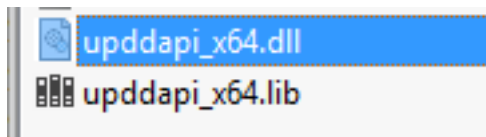

[6.0.365](#)

The zip file is a package containing all files needed by the API.

It should be extracted to any folder; but **NOT** the updd install folder.

Extracting to c:\program files (x86)\updd\x64api for example would be a good approach.

The important files are:

Which should be linked with your application as appropriate.

All other files are files used by Qt.
